

Documented Fire Risk Assessment

Our fire risk assessments comply with the Regulatory Reform (Fire Safety) Order 2005

Included in the fire risk assessment would be:

A site visit by a fully qualified fire risk assessor to conduct a full non-destructive site survey of the building or area of your responsibility to identify / assess:

- Who is at risk,
- Process and / or building hazards,
- Potential ignition sources,
- Any deficiencies in existing fire precautions / procedures,
- Correct type(s) / quantities and suitably maintained fire safety equipment,
- Appropriate fire training and drills,
- Appropriate signs / notices,
- Suitable means for detecting fire and raising the alarm if fire were to occur, and
- Adequate means of escape in the event of fire.

Our assessor would also evaluate your fire records and emergency procedures including any permit to work systems that there may be in place.

Following the site survey (fire risk assessment) of the Building(s), a fire safety management plan would be produced and issued to the responsible person(s).

Included within this document would be:

- Documented fire risk assessment (Format British Standard - PAS 79:2007 Fire Risk Assessment),
- List of significant findings,
- Recommendations on all remedial action(s), where required,
- Identification of potential ignition sources,
- Fire risk assessment performance indicator,
- Fire action plan for corrective action (Risk reduction / Legislative compliance)

By implementing and managing our fire safety management plan you will not only reduce the risk of fire occurring and ensure compliance with **current fire legislation (Law)**,

All fire risk assessments are conducted by ex-Fire Service personnel and all information provided within the document is in layman's terms (no technical jargon) and supported with photographs where necessary. If you require further information or a quote from us to conduct a fire risk assessment on your behalf please do not hesitate to contact us.
